

THE PLATFORM FOR EUROPEAN COMPLIANCE

Compliance, *proven.* Not described.

The AI Act, NIS2, DORA, GDPR and the Cyber Resilience Act in one system: every obligation with its official source, evidence read from your own systems, a plan with dates, and a trust center that shows your customers where you stand.

82

real obligations, each cited to its EUR-Lex source

5

EU regulations in a single record

16

modules reading the same evidence

AI Act

Artificial intelligence

Regulation (EU) 2024/1689

NIS2

Cybersecurity

Directive (EU) 2022/2555

DORA

Digital operational resilience

Regulation (EU) 2022/2554

GDPR

Data protection

Regulation (EU) 2016/679

CRA

Products with digital elements

Regulation (EU) 2024/2847

The EU no longer asks you to have policies. It asks you to *prove* your controls.

On statutory deadlines, to the authorities and all along the supply chain. A PDF that goes stale the day after you send it is no longer enough: you need an evidence layer that stays true every day.

01

Define your scope

Sector, size and use of AI: the scoping rules work out which of the 82 obligations apply to you and why, including your first deadline if an incident occurs.

02

Connect your evidence

Read-only connectors for GitHub, Microsoft 365, AWS and SAP check the real systems. Uploaded policies are read clause by clause.

03

Prove it and publish

A severity-weighted score, tasks with dates, a PDF audit pack for each regulation and a trust center for your customers.

THE EVIDENCE CHAIN

A real obligation, a real check

Every verdict shows where it comes from.

Rules decide. No language model writes a verdict, so an auditor can follow every step.

Evidence, not paperwork

A screenshot proves what was true once; a dated check proves what is true now.

Primary sources only

Every obligation cites the official text and the line it comes from, never a summary.

A history that stays

Evidence is added, never overwritten, so every verdict can be reconstructed.

Honest about gaps

A gap stays a gap until evidence closes it. No courtesy scores.

Sixteen modules, *one* record.

Prove it once, from the law and the evidence.
Run the organisation the regulations assume.
Publish what is true to the right audience.

Prove

4 MODULES

Obligation library

82 obligations, decomposed, each with its article and source line.

Evidence and connectors

GitHub, Microsoft 365, AWS and SAP, always read-only.

Compliance engine

Rule-based verdicts and a severity-weighted score.

Audit pack

One PDF per regulation: verdicts, reasoning and the full history.

Operate

10 MODULES

Incident clocks

NIS2, DORA, GDPR and CRA, from the moment of detection.

Risk register

Likelihood times impact, linked to what each risk threatens.

Supplier assurance

Certificates, DPAs and assessments; a direct alert when an incident involves them.

AI register

Every system you build or use, ChatGPT and Copilot included.

Policy lifecycle

Approvals, reviews and staff acknowledgements.

People and training

AI literacy (Art 4), cybersecurity and privacy.

Knowledge graph

Every item linked all the way back to the law.

Scope finder

Which obligations apply, computed from the rules.

Readiness check

The questionnaire, scored separately from the evidence.

Role-based dashboards

Leadership, compliance, IT and security: a view for each.

Publish

2 MODULES

Trust center

A live public page in place of the PDF that goes stale.

Access tiers and NDA

Public, verified business email, click-to-sign NDA.

ALSO INCLUDED

iPhone and Android apps, plus playbooks and Word templates in English, Italian, Turkish and Hindi.

THE DIGITAL TWIN

The whole organisation, connected to the law.

AI systems, suppliers, assets, people, risks and incidents in a single graph. Every node reaches a regulation, so impact analysis and the audit pack follow the same links.

188

nodes in the demo organisation

218

typed relationships

STATUTORY CLOCKS, LIVE

Record an incident, and the clocks start on their own.

hours from detection
or classification

The platform counts down each duty and records the date you submitted; the report itself stays yours to file, on the authority's own channel.

Not just what is missing: *how to close it.*

Every obligation has a playbook: the steps, a starting draft and the document your registers generate, in English, Italian, Turkish and Hindi, with your company name and dates filled in.

82

playbooks, one for every obligation

14

Word templates written to pass our own check

7

live documents generated from your registers

01 • STEPS

What to do, in order

Each step opens the right page, with the evidence to keep.

02 • DRAFT

The right template

Downloaded with your company, approval date and next review.

03 • REGISTER

The generated document

Supplier directory, inventories, incident and risk registers.

04 • CHECK

What it must say

The required clauses, verified by the document check.

TRUST CENTER

Answer the questionnaires before they arrive.

Public

Obligations, security overview and certifications, open to anyone who visits.

Restricted

DPA's, the subprocessor list and SLAs, once a business email is verified.

NDA-gated

Penetration test reports and architecture, available after a click-to-sign NDA.

Tenant isolation

Row-level security, enforced in the database.

Data in the EU

PostgreSQL in Frankfurt, encrypted at rest.

Read-only

Connectors never write to your systems.

Hash-chained

Evidence is added to, never rewritten.

Audit log

Who did what, to which record, and when.

Starter

€29 / month

1 user, 1 regulation, a public trust center and 1 connector.

Team

from €79 / month

Up to 5 users, every regulation, incident clocks and the audit pack.

Business

from €199 / month

Unlimited users, tasks, policies, the graph and role dashboards.

Enterprise

On request

Several entities, SSO, custom connectors and a named contact.

Most popular

Prove it once. *Show it everywhere.*

Prices exclude VAT; yearly billing gives two months free.

Try the live demo or ask for a quote: we reply within one working day.
